

CLAIMS

1. A transdermal absorption promotion composition comprising the following components (a), (b), and (c):

- 5 (a) propylene glycol,
 (b) a polyol fatty acid ester, and
 (c) lauromacrogol.

2. The transdermal absorption promotion composition according to claim 1,
10 wherein the components (b) and (c) are mutually soluble with the component (a).

3. The transdermal absorption promotion composition according to claim 1 or
claim 2, wherein the ratio of the total weight of the component (b) and component (c) to
the weight of the component (a) is 0.01-99 and the weight ratio of the component (c) to
15 the component (b) is 0.1-10.

4. A transdermal absorption preparation comprising the following components
(a), (b), (c), and (d):

- 20 (a) propylene glycol,
 (b) a polyol fatty acid ester,
 (c) lauromacrogol, and
 (d) a drug component.

5. The transdermal absorption preparation according to claim 4, wherein the
25 component (d) is a drug with comparatively high lipophilic properties.

6. The transdermal absorption preparation according to claim 4 or claim 5,

wherein the preparation is in the form of an ointment, gel, cream, gel-like cream, liquid, lotion, aerosol, liniment, plaster, poultice, or reservoir-type patch.

5 7. A homogeneous liquid preparation basically comprising the components (a) to (d).

8. An oily ointment or oily cream preparation comprising the components (a) to (d) and an oily base.

10 9. A method of promoting transdermal absorption of a drug in a transdermal absorption preparation comprising applying the transdermal absorption preparation of claim 4 or claim 5 to the skin.
